

Once the blank PivotTable report is ready, you can customise it to show the data as you like it. In the PivotTable Report page, on the left you will see a pane with five windows. This is the PivotTable Field List. The first window shows all the

Creating a Pivot Report

fields (or data elements) that can be added to the report. These can be dragged and dropped into the four windows beneath.

The “Report Filter” window allows you to narrow down the report using specific criteria. The “Column Labels” window specify what data will be displayed in the columns. The “Row Labels” window specifies what rows will be displayed in the rows. The Values window tells you which values will be shown in the various fields. Each of these windows corresponds to certain parts of the PivotTable report.

The layout of a PivotTable Report

You can select the “Defer Layout Update” checkbox to prevent the changes from being shown instantly. This may be useful when you want to focus on designing your layout and don’t want to be distracted with till you’ve organised all the data elements and formulas as you wish to see them. Once you’ve done that, you can click “Update” to show the changes.
