

will help you analyse the data both at the summary and detail level with the single click of a button.

If you move the Customer ID to the Report Filter area, you will now see the sales by date. By default, Excel will select all the Customer IDs for display—denoted by “(All)” in the filter field. You can then narrow the selection and choose to see the sales data for a limited set of customers—a minimum of one.

You can select on the “All” checkbox to show all the customers or select one or more Customer IDs from the list. Make sure that the “Select Multiple items” checkbox is ticked before selecting more than one customer. Report filters help you narrow down data based on criteria you specify. You also click on the drop down arrow on the Row Labels heading and get access to additional row level filtering options. Using this option you can select multiple filtering criteria to narrow down your selection.

Any of the data fields in the four window areas (Report Filter, Column Labels, Row Labels and Values) can be further manipulated by simply click on the data field and selecting an option from the menu which pops up. The first three sets of options enable you to

Using Report Filters
