

move the data fields around, in between the other windows or remove them. The Value Field Settings option allows you to further customise how the data should look. Value Field Settings help you control how the data should be summarized and how the values should be shown. The “Summarize by” tab allows you to choose from various options on how the data should be summarised. The “Show values as” tab enables you to further apply rules on how the data should be calculated and displayed. For example, you may show the sales of the three departments as a percentage of the total sales of each department. In this case you would select “Sum” in the “Summarize by” tab and “% of total” in the “Show values as” tab. You may then apply additional filters to narrow down your selection and view your data as you please. For example, the figure below shows the sales as a percentage of total sales for web design in descending order.

Selecting Value Field Settings

Value Field Settings

	Values		
Row Labels	Sum of Web Design Sales	Sum of Marketing Sales	Sum of Bandwidth Sales
11-001	11.40%	441,361.34	381,745.10
11-011	11.38%	45,423.28	19,217.21
11-017	11.17%	171,469.38	181,211.84
11-040	11.89%	194,416.87	140,441.88
11-019	9.07%	76,415.35	18,171.48
11-018	7.33%	161,288.18	488,133.38
11-010	6.66%	111,961.88	171,891.51
11-006	3.06%	211,361.01	211,406.77
11-013	1.87%	488,271.37	181,011.09
11-041	1.88%	117,614.81	171,517.34
11-012	0.00%	0.00	0.00

Refining data using value field settings

By right-clicking on any of the fields in the Row Labels column, you get quick access to some filter options with which you can sort, filter, group, ungroup, or move the data.
