

If the built-in functions and calculations do not provide you with the results you want, you can use your own formulas to calculate the results required. You can either create a formula that will calculate the results for a field (Calculated Field) or for one more item in the field (Calculated Item).

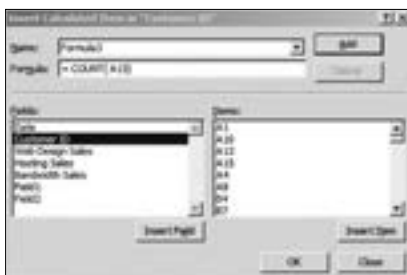

PivotTable			
Row Labels	Sum of Web Design Sales	Sum of Hosting Sales	Sum of Bandwidth Sales
Q 1/08	23,40%	463,383.28	383,793.34
Q 2/08	25.50%	45,133.38	35,311.25
Q 3/08	25.12%	171,645.34	195,351.44
Q 4/08	22.80%	286,424.87	260,842.48
Q 1/09	9.07%	76,875.28	68,175.48
Q 2/09	7.39%	543,068.34	488,155.38
Q 3/09	4.00%	333,963.38	273,093.82
Q 4/09	3.06%	333,963.38	303,406.77
Q 1/10	1.87%	468,075.37	353,613.89
Q 2/10	1.54%	517,824.82	276,587.55
Q 3/10	0.95%	711,935.80	68,084.80

Row Label Quick Access Filter Options

Using Calculated Fields

To create a formula based on the Calculated Field click on Options and in the Tools group select Calculated Field from the drop-down of the Formulas button.

Using Calculated Items

In this example, we have created a new Field called Field2, where the total of Web design and Hosting is shown. To create a formula based on a Calculated item, click on Options and in the "Group" section, click on Ungroup and click on the field where you want to add the calculated item. Then click on the Tools section and select Calculate Item. Depending on which cell you have selected in the PivotTable, the Calculate Item field maybe enabled or disabled. If it is disabled, Excel will not be able to perform item level calculation on that field.

In this example, we have inserted a row into the PivotTable
