

most out of your data. This is especially useful when you want to highlight exceptions in the data that may otherwise not be quickly visible. To quickly apply conditional formatting, switch to the Home tab after selecting your range of cells. Select the Styles group and use the options in the Conditional Formatting button. These options allow you to specify rules on how the data within the selected range should be highlighted.

Layout & Formatting in PivotTable Options

Using Conditional Formatting

5.4. Creating PivotTables From External Data

To connect to an external data source—which could be an OLAP (Online Analytical Processing) server, text files, Access database or any other valid source of data—you can use the Workbook Connections dialog box. Note that with the new security features access to external data sources may be disabled in Excel 2007. You will need to enable them from the Microsoft Office Trust Center in Excel Options under the Office Button.
