

To access the **Workbook Connections** dialog box click on the **Connections** button under the **Connections** group in the **Data** tab. Click on the **Add** button and you will see a list of existing connections that you can use.

Get External Data from existing connections

If this is the first time you are connecting to the external data source, then depending on the source you are connecting to, you can use one of the options in the **Get External Data** group in the **Data** tab.

Get data from complex systems

Clicking on **Existing Connections** will open a dialog box which is the same as the one you get when clicking on the **Add** button in the **Workbook Connections** dialog box.

You can click on the **Other Sources** button if you want to get access to data from **SQL Server**, **Analytical Services**, and **XML**. You can also use the **Data Connection Wizard** and **Microsoft Query** to
