

6.2.7 Other charts

Apart from the six chart types mentioned, you will find the Other Charts option. This has five chart types listed under it. One of the reasons for listing them separately is their specific use over only certain types of data.

6.2.7.1 The Stock chart

As the name suggests, this type of chart is a best fit to deal with stock market data. Between three to five data series are required before you can use this

The types of Stock charts

chart. Four sub-types are under this type, and each uses different values for high price, low prices, closing price, open prices, and volume. The sub-types have series of values in a particular order: High-low-close (three series), open-high-low-close (four series), volume-high-low-close (four series) and volume-open-high-low-close (five series). Thus, two sub-types use trade volume and the other two use trade value. Also, the sub-type using three series can be used for displaying other data, for example, temperature: high-low-close.

6.2.7.2 The Surface chart

Surface Charts display two or more data series across two dimensions on a continuous surface like a curve, with colour distinctions between each series.

The types of Surface charts

Four sub-types are listed. However, 3D points are not plotted, and such charts are used for data that contains more than two numeric data series.

6.2.7.3 The Doughnut chart

The Doughnut is similar to a Pie chart, but data is displayed in the form of a doughnut. The advantage is, it can display more than
