

wireless, broadband, or dial-up connection to the Net

- b. Set up a wireless router or access point, which will take you through the steps needed to create a small wireless network at your home or workplace
 - c. Set up a dial-up connection, which will take you through the steps needed to connect using a modem
 - d. Connect to a workplace, which will let you connect to a VPN
4. **Manage network connections:** This setting will open up all the active connections on your network and allow you to manage them. For example, you can use this setting to enable or disable an onboard network controller, or to share a connection with another network user.
5. **Diagnose and repair:** If you are experiencing trouble with one or more network resources, click on this link to ask Vista to try and solve the issue. Vista will try to automatically solve common issues with networks by restarting devices, or refreshing their IP addresses, and so on. If all fails, Vista can also suggest some

Diagnostics for networks

repair options (disable and re-enable a device, or reboot an access point, etc.). Vista will also offer to report the problem to Microsoft if it is unable to resolve the issue.

8.2 Internet Connection Sharing
