

need to set up sharing permissions. Such permissions can be granted to an individual or to a group of users on the same network. For example, you might allow some people to only view your shared files, while allowing others to both view and edit them.

Use Public Folders to share content

Vista also offers Public folders to each user account. Data stored in these public folders are accessible to all network users. With this method, you copy or move files to your Public folder and share them from that location.

Depending upon the version of Vista you have, the Public folders can be: Recorded TV, Public Documents, Public Videos, Public Music, Public Downloads, and Public Pictures.

If you turn on file sharing for the Public folder, anyone with a user account and password on

publicshare

your computer, as well as everyone on your network, will be able to see all the files in your Public folder and subfolders. You cannot restrict people to just seeing some files in the Public folder. However, you can set permissions that either restrict people from accessing the Public folder altogether, or that restrict them from changing files or creating new ones. By default, network access to the Public folder is turned off unless you enable it.

To access your Public folder: open Windows Explorer by selecting **Start > Documents**, or by typing out “wi ex” in the search panel on the Start menu and pressing [Enter]. Inside Explorer, look to the left to find the Navigation pane. Here, under the “Favorite Links” heading, click on Public. If you have configured the
