

Task Manager, press [Ctrl] + [Shift] + [Esc]. You can then move to the Performance tab and click on the Resource Monitor button to launch the Resource Monitor. To exit a program which is not responding, select it under the Applications tab and click on End task.

Find out the program name for each process

Resource Monitor also comes in handy when your PC starts to go sluggish

9.3 Startup Management

The faithful tool—`msconfig`—still serves us well under Vista. This system configuration tool can be used to change several aspects of Vista startup. To launch the tool, type “`msconfig`” in the search field on the Start menu. Let’s step through each of its tabs:

9.3.1 General

Lists choices for startup configuration modes:

- Normal startup. Starts Windows in the usual manner. Use this mode to start Windows after you are done using the other two modes to troubleshoot the problem
- Diagnostic startup. Starts Windows with basic services and drivers only. This mode can help rule out basic Windows files as the problem
- Selective startup. Starts Windows with basic services and drivers and the other services and startup programs that you select

9.3.2 Boot

Shows configuration options for the operating system and advanced debugging settings, including:
