

Dragging it into the workflow area expands it to a new message form.

Create the new mail message with all details

Step 2:

The next step is to get all documents edited within a week. And what better tool to do this than Tiger's excellent search tool, Spotlight. Clicking on Spotlight in the Library tab shows all the actions under Spotlight. Search for .doc shows all results under documents.

Step 3:

The rest of the actions are very straightforward as seen in the screenshot.

- Copy items to a different folder to prevent overwriting
- Create an archive of the files
- Add the attachments to the email message previously created
- And finally send the outgoing messages.

As simple as that.

What's more, Automator has a warning system in case the actions in the workflow aren't compatible with each other.

Step 4:

If one needs this workflow on a per-use basis, replace the "Spotlight" action with the "Get Selected Finder Items" action. The saved workflow then needs to be placed in ~/Library/Workflows for easy right-click access.

The completed workflow

5.7.2 Creating Actions

While the default set of actions is more than enough for most tasks, the real power of Automator is unleashed while creating an
