

scores over it, since it has remained a basic audio player: it's extremely light and supports various formats like Ogg Vorbis, MP3, FLAC, Musepack, Monkey's Audio, Shorten, Wavpack, AAC, and WAV/AIFF.

The interface is very simple. Cog is perfect for those who want just a simple music player, without the jazz and complexity of iTunes.

ffmpegX

The Swiss Army Knife of video converters on the Mac platform! This is a shareware video encoder that supports a variety of formats. The current version is 0.09x, which was released in October 2006.

ffmpegX reads formats such as MPEG-1, MPEG-2, MPEG-4, DivX, XviD, VOB, MOV, WAV, H.263, H.264, WMA, WMV, AAC, AC3, 3GP, and more. It can convert these to DivX, XviD, H.264, MOV, DV, 3GP, MP2, MP3, AAC, MPEG-1, MPEG-2, VCD, SVCD, KVCD, DVD, and more.

The ffmpegX converter window

It's one of the easiest video encoders available—you just need to drag and drop a video file into the ffmpegX window to convert it. ffmpegX will automatically identify the format in which it is encoded, and then you just choose the format you want to convert it to.

Final Cut Pro

Apple's Final Cut Pro (FCP) is one of the reasons for the widespread perception that Macs are the best for video and image editing. It's probably the best non-linear video editing tool there is, and has been used for many major movies, including Frank Miller's *300*. It supports every imaginable movie format—including HD—and features an architecture that makes it easy for developers to build plugins for it.
