

problem, because the site claims to have similar security measures as the US government.

Community sharing is possible if you set some of your files to be viewable by the public. Conditions apply, of course, and copyrighted and commercial music or

movies cannot be shared, but you can keep your collection private. Once files are shared publicly, they are subjected to Yuntaa filters that check for inappropriate material. Pornography, sexually explicit content, information involving illegal acts such as making of explosives, violence, acts of death, images of hatred against certain community / race / colour are all deleted.

We loved Yuntaa for its cool looks and good interface with animated icons representing the contents of a folder. You will see folders like My Files (similar to My Documents in Windows), My Audio, My Photos,

etc., which we found useful for proper segregation and organisation of data. We uploaded a couple of music and video files, and were able to play them back directly from the browser itself without the need to download them.

Yuntaa offers an alternative way to share media files over the Net

Yuntaa features a very friendly user interface
