

mail integration with your events and tasks similar to Outlook. Once the extension is downloaded, open Thunderbird, go to **Tools > Add-ons > Install...** and select the downloaded .xpi file for Lightning to be installed. Finally, restart Thunderbird. There will be a calendar in the bottom left pane with tabs for Agenda, To Do, and Calendars.

Calendar (Lightning) for Thunderbird

The Calendar opened in Month view

Clicking on a date will now open the calendar in its default view. Double-click your desired date and an Add Event window will open up which you can use to specify your event or task details. Click on the **More>>** button and it will expand to give you more options including inviting attendees via e-mail and setting priorities. If your mail recipient has a compatible calendar application, he can add your invitation to his calendar directly. You can have multiple calendars as you require. Lightning

Create events and tasks with ease

will by default will create a calendar called Home. You can create specific calendars that you share with others, and by using the Provider for Google Calendar extension (<https://addons.mozilla.org/en-US/thunderbird/addon/4631>), you can
