

Changing language settings

- User Interface: You can't really change this from English (USA), which kind of makes it a pointless setting
- Locale Setting: Change this to the country you live in—in our case, English (India)
- Default Currency: Obviously, we Indians will want to set this to INR Rs. English (India). You can set it to other languages though—Hindi, Marathi, Punjabi, Gujarati, Oriya, Tamil, Telugu, Kannada, and Malayalam
- Default languages for documents: We set this to English (UK), but you can set it to English (India), or any other language available in the drop-down
- For the current document only: If you want the language settings to only apply to the current document, check this box
- Language Settings > Writing Aids > Options: Here you can change whether or not the AutoCorrect feature looks at uppercase words, whether OoO should check spellings as you type, and various other options

1.5 Find And Replace

OpenOffice.org has really good find and replace functionality. Perhaps the best part of this function is the ability to search for wildcards, which is not available in most text editors. Below you'll find some helpful tips for searching in Writer.
