

2.1 Introducing Calc

Calc's interface

Everyone from the accountants in your office to team leaders uses, or should use, spreadsheets. Even at home, you can use a spreadsheet application to manage your finances, make your shopping lists, etc. We'll focus on using OOo's Calc in the office. We're going to keep this first part simple, for those who have never used a spreadsheet before—if you have, skip to §2.2.

When you start up Calc, you will see a blank spreadsheet. If you've read through the previous chapter about OOo Writer, you will not have any trouble identifying the toolbars. As with Writer, Calc has the default Menu Bar, Formatting Toolbar, and Standard Toolbar.

A spreadsheet is divided into rows and columns—rows run horizontally from left to right and columns run vertically from top to bottom. Each row and each column intersect at one point, which is called a cell. You will see many little rectangular boxes
