

Changing the order in which slides play

Advance Slide: Using this you can choose whether a mouse-click is required to go to the next slide or whether the slide changes automatically after a time frame you can define. Using this option for individual slides, you can have groups of slides that automatically progress to the next, but at key points in your presentation you can set it to require a mouse-click so that the presentation does not progress to the next point without the presenter telling it to.

3.5.1.4 Rehearsing Timings

A cool feature you just have to try is the Rehearse Timings option, which you can access by selecting **Slide Show > Rehearse Timings**. If all your slides are set to automatically progress, this will come in handy when trying to tie in a speech with the slideshow timing. To use this feature, set all slides to automatically progress, and put a large value in the “Automatically after” setting—say 60 seconds. Don’t worry, you’re not going to have to wait that long when rehearsing timings. Now, go to **Slide Show > Rehearse Timings**, and you will see that the slideshow starts in
