

Modifying arrow styles

you can use the effects to see what they do. Just remember to keep the angle of illumination the same for all shapes if you want the drawing to look even remotely realistic.

If you have a 2D object, you can apply these same effects to it, but will have to convert it into a 3D object first. To do this, right-click on any shape and choose **Convert > To 3D**. Now you can go about applying all your 3D effects to it. You can also do the same thing by going to **Modify > Convert > To 3D**.

4.6 Joining Shapes

Let's say you want to draw spectacles. You can just import an image into draw, but the problem is that this will not be a scalable vector graphic. The only way you can "draw" spectacles is to do it
