

Here's what each icon on the Standard Toolbar actually refers to

for you to use, simply by a single click of the mouse.

Each of these buttons is there for the sole purpose of your convenience, to beat the clock and cut down on the clicks. And for precisely the same purpose, we now specify the function that each button performs.

Now that you finally know what all those icons on the toolbar really mean, let's figure out how to use some of them.

- 1. **New** - opens a blank presentation (Ctrl + N).
- 2. **Open** - makes the 'Open' dialog box pop up, asking you to choose the specific file you want to open and its location. (Ctrl + O).
- 3. **Save** - Saves the current presentation and displays 'Save As' dialog box the presentation has not been saved earlier, so you can give it a name and a location (Ctrl + S).
- 4. **Permission** - (Added in 2003) helps to make your presentation more secure.
- 5. **E-mail** - Emails the active presentation as an attachment.
- 6. **Print** - Prints the active presentation.
- 7. **Print Preview** - Displays the (File > Print Preview) dialog box.
- 8. **Spelling** - makes the (Tools > Spelling) dialog box pop up on your screen (F7).
- 9. **Research** - displays the Research Task Pane (vertically on the right). This was only introduced in PowerPoint 2003.
- 10. **Cut** - allows you to cut the portion selected and store it on the clipboard till you need it. (Ctrl + X).
- 11. **Copy** - Allows you to copy to clipboard, any material selected. (Ctrl + C).
- 12. **Paste** - Pastes the cut or copied material from the clipboard to a destination of your choice. (Ctrl + V).
- 13. **Format Painter** - This is one button you'll love. It copies the format of the selected object or text and allows you to use the same elsewhere.
- 14. **Undo** - takes you one step back. Undoes any action you performed last (Ctrl + Z).
- 15. **Redo** - repeats the action you last performed. (Ctrl + Y).
- 16. **Insert Chart** - Creates a chart by inserting a Microsoft Graph object.
- 17. **Insert Table** - sets up a table on to your slide.
- 18. **Tables and Borders** - Toggles the display of the Tables and Borders toolbar.

7.3.2 Selecting An Item On A Slide

PowerPoint automatically guesses when you wish to select a complete word and as the mouse is selecting text, it refuses to do so if you're trying to select only part of a word. If this gets really bugging, just go to **Tools > Options > Edit** and uncheck the box that says "When selecting, automatically select entire word".

Every tab helps you perform a function quick and easy
