

In PowerPoint 2007, you can change the layout of a slide even while working in Outline mode

To make working easier, it is advisable to stick to the standard layout till you finish entering all the content. Once you're finished with the content, you can then turn your attention to changing the layout and formatting. Ensure that you apply your design template (see Chapter 5) so that you can see how the text flows within the strictures of your design.

8.3 Creating A Summary Slide (PowerPoint 2003 only)

If you are working with PowerPoint 2003, you'll love the Summary Slide tool. This enables you to create quickly a summary of all the slide titles in your presentation. This can be used as a Table of Contents, an Agenda slide, or even as a conclusion slide to help with recall of the topics covered. Refer chapter 2 for more on audience recall.
