

icon, use a dark shade as Line Color and increase the Pen Weight in the Line Style icon. In PowerPoint 2007, from the Home tab, go to Shapes, and select the shape you need. Then click on the table, go to Table Tools > Design, and set the No Fill option under Shading. Also set the line's colour and weight.

11.3 Importing Tables from Word and Excel

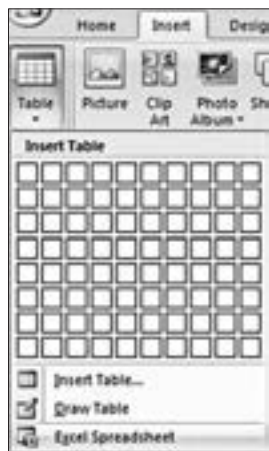

In Word, you have plenty of options for formatting tables; Excel offers excellent tools for mathematical operations. PowerPoint lacks in these aspects. Also, you might have a perfectly-formatted table prepared in Word or Excel, which you might want to use in your presentation. You might therefore need to import tables into PowerPoint.

11.3.1 Importing Word tables

Word tables can be imported by a simple copy/paste operation. Just open your Word document, copy the table, and paste it into PowerPoint. The table will be an integral part of your slide, and you can edit it within PowerPoint. To get the full benefits of Word's table features, go to the slide where you want to insert the table, select Insert > Paste Special (in PowerPoint 2007, Home > Paste > Paste Special), and select Microsoft Office Word Document Object. In both cases, select the radio button for the Paste option. To edit it in Word, double-click on the table. Clicking away from the table reverts to the original PowerPoint view.

11.3.2 Importing Excel Spreadsheets

The procedure for importing Excel spreadsheets is similar. In Excel, select the cells you want to embed in your
