

- **Pie chart:** The simplest of chart types. It is a circle divided into sectors; each sector represents a value. It shows how values compare as parts of a whole. Pie charts are best used for comparing values associated with each other.

Probably the most-loved of all kinds of charts!

- **XY chart:** This is an “advanced” chart type, used to show similarities between data values. It is used to find unforeseen relationships between data variables. Unlike other charts, XY chart values are usually not plotted against time and variations are not constant at regular periods. For example, analysis of car sales with respect to income would lend itself to representation by an XY chart.

A more advanced kind, the XY chart can be demanding on the audience
