

○ **Radar chart:**

Looks like a spider web, and is used to show how the data values relate to the point in the middle of the chart. The further the data point is from the central

The radar chart is probably the most exotic type. A radar chart is used to make subjective comparisons.

Now that we have told you different chart types with some examples, it's now up to you to choose the right kind of chart for your presentation.

## 13.3 Creating A Chart

Let's get right down to creating one. Select **Insert > Chart...** (or click the **Insert Chart** icon on the **Standard Toolbar**). In PowerPoint 2007, go to **Insert tab > Illustration > Chart**.

In PowerPoint 2003, once you've selected a type, you'll see a sample graph on the slide, and a datasheet that contains the values for the sample graph. You can use this template and change the values in the datasheet, and the changes get reflected on the graph as soon as you enter a new value.

In PowerPoint 2007, when you insert a chart, a pop-up appears asking you to choose the template (bar chart, pie chart, line chart...). Upon selection, the screen gets split, with PowerPoint occupying the left of the screen and Excel occupying the right. As in the case of PowerPoint 2003, you will see a
