

The New Millennium

Here we'll detail the notable events that happened in computing between the years 2001 and 2007. Over the past seven years, technology has jumped forward considerably; however, instead of reinventing the wheel, we seem more inclined to perfecting existing technology. Every single one of you reading this book has lived through the events we detail here, and will agree that this is the decade of innovation, not invention—where a good idea *uses* technology to become a success, rather than the technology *being* the idea.
