

a normal stereo sound source is processed and surround sound channels suited for a 4.1 or higher speaker system is generated.

## 4.5 Interfaces

Here are some of the interfaces seen commonly on computers and TVs.

### 4.5.1 Analogue / mini D-Sub 15 / VGA

This is the standard interface for analogue monitors. It has 15 sockets.

A VGA Connector

### 4.5.2 Audio

Audio connections are colour-coded with Green for speaker output, Red for Microphone input, and Blue for other line input.

Audio sockets

### 4.5.3 Coaxial

This connector is usually seen in TV antenna cables.

Coaxial plugs

### 4.5.4 DVI

Digital Video Interface is needed to connect digital monitors like LCDs. Three types of DVI connections exist: the DVI-A, which carries analogue signals only, the DVI-D, which carries digital signals only, and the DVI-I, which can carry both analogue and digital streams. DVI-I sockets are the most common.

A DVI-I plug

### 4.5.5 HDMI

High Definition Media Interface; a connector required to view High Definition
