

video on supporting hardware. This port is needed to view HDCP (High Definition Content Protection) protected content. Unlike earlier devices, which required separate audio and video cables, HDMI carries both signals.

An HDMI plug and socket

4.5.6 RJ 45 / LAN

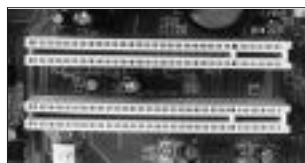

This is the socket to connect a LAN cable (used for networking).

An RJ 45 LAN socket

4.5.7 PCI

Peripheral Component Interconnect, a 32-bit bus for data transfer. Typically used to connect devices like sound cards.

A pair of PCI slots

4.5.1 PCIE

Motherboards usually carry two types of PCIE slots—PCIE X16 and PCIE X2.

A PCI-E slot

4.5.8 PS/2 Mini Din

This is a six-pin socket used to connect PS/2-compatible mice and keyboards.

A PS/2 mini din

4.5.9 RCA

This is the standard connector used for video and audio output signals from standalone media players. RCA jacks are the preferred connector for Composite and Component audio / video signals.

An RCA connector

4.5.10 S-Video Mini Din

The Mini Din socket is seen in many graphics cards; it allows the signal to be displayed on a
