

technology, but it is not an issue in Flash-based devices because they have no moving parts.

5.6.9 Video Formats

MPEG-4 video is widely supported by personal media players like iPod and PSP. Windows Media Video (.wmv) is another supported format, while many manufacturers support DivX and XviD formats. There is not much difference between these video formats in terms of quality, though open formats like MPEG-4 and XviD will have lesser compatibility issues with hardware.
