

and due to the absence of moving parts, are more sturdy and silent. Since they are much more expensive than disk-based storage media, they are still niche products. The current maximum capacity of an SSD is 64 GB, with larger disks coming soon.

2.1.40 TPI

Tracks per inch refers to the number of tracks present per radial inch of a platter.

2.1.41 Tracks

Data is stored in concentric paths on a platter; the concentric paths are called tracks.
