

you'll find it more functional. Under Accounts > Sorting Office/Filters, you'll be able to configure the filters for various categories of mail.

Now there are many features unique to The Bat!, so here are some of them, not in order of importance:

In The Bat!, you have a complete filter control centre

### 1. The Mail Dispatcher

A very useful feature you'll notice is The Bat!'s Mail Dispatcher, using which you can manage mail on the server, *even with POP3 accounts*. This, of course, is very useful when you receive messages with large attachments and you're unable to download them because you're on dial-up. To "dispatch" your mail on the server, you go to Account > Dispatch mail on server, and choose "All messages" (assuming you've set

Right-clicking on a message gives you a lot of options

messages to be deleted from the server after they're downloaded). The Bat! connects to your mail server, gets the headers, and presents a list of messages with their current flags:

- Read (Mark message as read without downloading)
- Receive (Retrieve message)
- Delete (Delete message without downloading)
- Open (Retrieve message and open it immediately)

You can flag the messages as you'd like; Select Message > Execute and specify what you want.
