

will allow you to format your text just like Microsoft Word. There is a tab called Source which will allow you to see the HTML source code behind the entry. The Preview tab will allow you to see how the entry will eventually look like on your blog.

The last button on this toolbar is the Photo Uploader. This button too does what it says—uploads photos and videos to major photo hosting sites like Flickr, Photbucket, Piczo and YouTube. You can also add images to your Facebook profile. After you click the button on the toolbar, you will see a new window in front of you into which you can drag and drop images files or videos from your computer. You can then enter a description and add tags to the photos. You can also crop or rotate them from here. Once you have the desired photos and descriptions in place, you can select the account you want to add these photos to and click on the upload button in the window. You can also add the same description for all the photos being uploaded by clicking on the 'Batch' tab above.

3.5.2 Tips And Tricks

One of the biggest advantages of Flock is that it is based on the FF browser. This means that it'll be able to run all the extensions and plugins from the FF add-ons repository. You can also use the FF browser tweaks we mentioned earlier to optimise Flock. Here are the keyboard shortcuts you can use with the browser:
