

this Page” header gives you a quick summary of the contents of that page. This is very useful as there is nothing as agonizing as scrolling down a horrifyingly long page only to realise it has nothing to do with what you want. There is also the cool “Program Finder” (more on that later). It is also possible to sort software by license, but this is rather tiring. Each section has an RSS button

and a KLIP button so you can subscribe to it and be updated through your favourite news reader. The title bar also displays how recently that particular section was updated. We loved the download basket which allows you to queue up downloads and download them all in just one go. Kind of like a shopping basket. However, you do need to complete a free registration form to use

the download basket. While browsing software, the list displays a very large number of programs on one page with very little information. We would, however, have preferred fewer items, but with more information in a single glance. Although feature packed, it can be a intimidating to the new user. There are also various tidbits scattered around the site such as “This week’s pick” which helps you find cool new software while you are browsing. Though very nifty, this seems to clutter the interface.

The typical download page consists of basic software information including a rating and an extremely obvious download button. This page is nice and clean and very simple. Whatever ads you see on the site are text ads.

The feature-packed Home Page

The typical download page.

6.1.3 The Download Test

The download test was for a freeware Web browser, but not the
