

used often in large spreadsheets to “look up” specific data values in a cell and depending on the value, a given operation is executed. This reduces the burden on the user to actually sift through piles of data wondering what has to be changed in all directly and indirectly dependent spreadsheets. With the GoogleLookup function, Google spreadsheets would actually look up the World Wide

The screenshot shows a Google Spreadsheet interface. The title bar says 'Google Docs'. The spreadsheet is titled 'Expenses' and was last modified on Feb 13, 2008. The formula bar shows '=GoogleLookup("India"; "internet users")'. The spreadsheet contains a table with the following data:

	A	B	C	D	E	F	G	H	I
1	March 4, 2008	Receipt	1000						
2	March 5, 2008	Receipt	500						
3	March 6, 2008	Receipt	100						
4	March 7, 2008	Expense	1000						
5		Weekly balance	2100

Below the table, there is a data lookup result for New Delhi: 28°34' N 77°12' E. The source is highlighted as Wikipedia.

Use the power of the Internet to ease your spreadsheet research with GoogleLookup

Web for data fields. This is as good as your spreadsheet doing research for you. An example: =GoogleLookup(“India”; “internet users”) will populate the cell with that figure.

However, many similar attempts initially proved futile. The closest result we got was for =GoogleLookup(“India”; “capital”) which yielded the value New Delhi 28°34' N 77°12' E. The source for this data is highlighted. In this case it is mentioned as Wikipedia.

1.1.3 Google Presentations

With the markets and finances booming across all domains, it's all about presentations! The worst part of it all is the most crucial things are generally required in the shortest of notice. Tools such as these help in securing a redundant copy of that crucial document, spreadsheet or for that matter even presentations.

The next tool from the stable of Google Docs is Google Presentation. Similar to the way we used Document and Spreadsheet, create a new Presentation page by clicking on New > Presentation. You will see a blank page, similar to the start page of MS PowerPoint. You can add a title and sub-heading as you did in Google Documents. Similarly, adding an image is all the more simple. A simple slide is shown in the screenshot below.
