

To rotate or flip an entire image:

Choose **Image > Rotate Canvas**, and choose one of the following commands from the submenu:

- **180°** to rotate the image by a half-turn.
- **90° CW** to rotate the image clockwise by a quarter-turn.
- **90° CCW** to rotate the image counter clockwise by a quarter-turn.
- **Arbitrary** to rotate the image by the angle you specify. If you choose this option, enter an angle between -359.99 and 359.99 in the angle text box, and then select CW or CCW to rotate clockwise or counter clockwise. Click OK.
- **Flip Canvas Horizontal** (Photoshop) to flip the image horizontally, along the vertical axis.
- **Flip Canvas Vertical** (Photoshop) to flip the image vertically, along the horizontal axis.

1.4. Colour Modes

Colour modes are used in image editors to specify the basic set of colour combinations that an image would have. Photoshop supports the following colour modes:

1.4.1. RGB

Photoshop's RGB Colour mode uses the RGB model, assigning an intensity value to each pixel ranging from 0 (black) to 255 (white) for each of the RGB (red, green, blue) components in a colour image. For example, a bright red colour might have an R value of 246, a G value of 20, and a B value of 50. When the values of all three components are equal, the result is a shade of neutral grey. When the values of all components are 255, the result is pure white; when the values are 0, the result is pure black.
