

the effects in action. The Sharpening sliders are the same as the Smart Sharpen filter in Photoshop.

Amount:

This is the strength of the sharpening filter that will be applied.

Radius:

this is number of surrounding pixels that are affected by the sharpen filter. The higher the value, the more prominent the effect.

The HSL / Greyscale Tab

You can even tweak the way you convert an image to greyscale

Here's where you make colour adjustments to your images. Each of the three tabs—Hue, Saturation and Luminance—has sliders for eight basic colours; here's what happens to them when you adjust one of the three parameters:

Hue:

Dragging any one of the sliders under the Hue tab changes the colour of the image—you can drag the Greens slider, for instance,
