

Smooving up in life

blue axis. The selected region of the TIN will rise or compress along with the movement of the mouse. If you'd like the region to offset an exact measure, you could type the value in the VCB.

- Click to end the process.
- You can select the Smooved region and context click to soften it.

This will un-triangulate the surface, making the smoooved area more coplanar.

Smooth Operator

Isn't this so easy? And you thought this one would be a cliff-hanger!
