

[Shift] button of your keyboard while dragging the mouse up or down. If you'd like to add detail without offsetting the new vertex, hold down the [Ctrl] key.

You could smoothen or soften the regions you've added details too to make it look better.

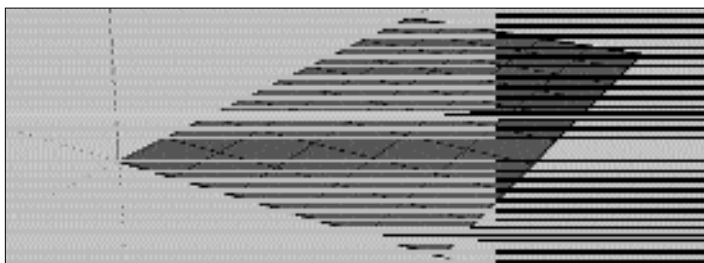

[Ctrl] and [Shift] help add details better

5.8.2. Using the Add Details Tool To Create Smoother Areas

If you pre-select a section of your TIN using the Select Tool, you could then use the Add Details Tool to divide and sub-divide those triangles to create a smoother area.

The way to do it would be thus:

- Create a Sandbox from Scratch as shown earlier and explode this one too. Use the 'Select Tool' to select a portion of the TIN.

Scratch out another one
