

3. Now select the follow-me tool and click on the 2D shape we just made. Then drag it along the upper edge of the building.

4. Keep dragging till you reach your starting position once again

5. The parapet is complete!

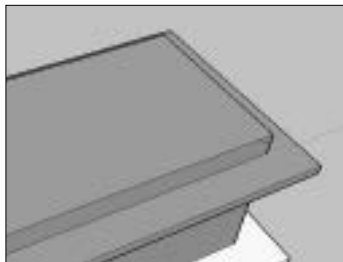

6. Note: If you want the parapet to be at each 'floor', just draw the 2D shape at the desired level on the building and drag it along the desired edge.

Subtracting

When you have to construct a bevelled or chamfered shape, just draw the shape on the face of the existing structure and use the follow-me tool to drag it along.

(Continuing with our previous project)

1. Select the face of the structure and make the desired shape
