

that each of these sink in to the same degree by specifying the same value (positive for one face and negative for the opposite face) when pushing each entity inwards and then pressing [Enter].

10. Now use the Push / Pull tool to push in the walls (fill in the same measurements for both the opposite walls in the VCB) to create a uniform protrusion all around the cottage—a sort of pent roof.

Shady Roof

11. Switch to the Top view (Camera > Standard Views > Top) and use the rectangle tool to draw a large rectangle around the cottage on the ground plane. Use the paint bucket tool to colour this green. Great, now you've got a garden patch.

Grass is always greener

12. Now let's try and make some garden stools for the green patch outside the cottage. Select the Polygon tool. Use the VCB to specify the number of sides. Set the number of sides to 15.

You need to first put the shape on the floor before extruding it

13. Click—drag—click to make a polygon on the ground plane, on the garden patch next to your cottage.
14. Use the Push / Pull tool to extrude the polygon upwards in the direction of the blue axis. Pull it to the height of a typical chair (relative to the cottage you've drawn).

Vertical chairs

15. Select the Rotate tool. Choose the upper face of the stool we just made and rotate it as described in 2.6.2 above.
