

Trillian ([www.trillian.cc](http://www.trillian.cc)) and Digsby ([www.digsby.com](http://www.digsby.com)).

### What Is My IP?

**Q** I'm a BSNL Dataone home user with a 500 plan. I login to my modem settings using the IP 192.168.1.1. In Windows, my IP address in the TCP/IP properties in the network settings is 192.168.1.136. When I open sites such as [www.portforward.com](http://www.portforward.com), it shows my IP as 117.XX.XX.something. Which of these is my actual IP address? Then what are the other two IPs? Do I have a dynamic IP?

**ajaybc**

**A** The 192.xxx.xxx.xxx IP address is your local IP for your LAN. The 117.xxx.xxx.xxx IP is your external Internet IP that is reported by the site you have mentioned. Most ISPs allot dynamic IPs to their clients.

### Wedding DVDs

**Q** I need to join three wedding files from three different CDs. I need to make an autoplaying DVD.

**mkmkmk**

**A** To make a continuous DVD, you do not need to join the video files. If you do so, it will unnecessarily take a long time. Just use any DVD authoring software like Nero vision to make a DVD with menus.

**Cool Buddy**

You can use DAT Joiner (<http://www.321slideshow.com/dat-joiner.htm>)

**KoolKid**

### DVD Using A UIF File?

**Q** I have a UIF File of around 3.17 GB. How can I write it on a DVD? Nero is unable to do that.

**satyamy**

**A** I guess you can use MagicISO image file. You can use it for burning as well.
