

Q I am looking for a tool to turn on Windows at a specific time, but didn't find any. Please help me if you find any. Thank you in advance.

Rakesh Rao

A The software I used are: Flashget from www.amazsoft.com for http / ftp downloads. uTorrent from www.utorrent.com for bittorrent. Activate and configure scheduler in both. System Scheduler from www.splinterware.com will help with scheduling. Auto PowerOn and ShutDown from www.lifsoft.com for waking from hibernate and shutting down.

Auto Power-on and shut-down allows automatically turning on and off of your computer

CD Problem

Q I use windows XP (Home edition, SP2) and I am using Nero 5. I have recently added a combo drive (DVD reader + CD writer) of IBM. Now my Nero doesn't accept it and I can't burn any CD. Is it due to a virus problem or Nero needs to be upgraded?

Bishwadeep Bagchi

A You should upgrade your Nero to a newer version to add support for your drive. In the meantime, you can also try some other free alternatives like CDBurnerXP (<http://cdburnerxp.se>)

Install MySQL

Q I've bought a domain name and Web space for my Web site. It's a Windows server for hosting. I have built a Web site with MySQL database. Now, the problem is that, there is no MySQL server installed on the
