

some heavy rendering applications. I'm a complete newbie to OSX.

Rudresh Jariwala

A A MacBook Pro is what your friend is talking about. The Dell XPS will probably give you more power than an entry level MacBook Pro. The MacBook Pro will also attract a lot more attention among your friends than a Dell XPS. If you want the ultimate performance for the work you do, then a proper performance desktop is highly recommended.

Connect TV To PC

Q I have an Intel Pentium 4 HT, with an Intel D101GGC motherboard, NVIDIA's 6200 LE (256 MB) graphics card. How can I connect my PC with my 21-inch Sony WEGA (HW21-M80) TV?

I want to do so to watch movies! Please help!

Avik Sarkar

A Your graphics card may come with a TV-out feature, which should allow you to connect to your TV. Most cards come with an S-Video out but you may need to purchase a converter for S-Video to RCA or component.

PCI Problem!

Q I have an IBM PC with 768 MB of RAM with processor speed of 2.60 GHz Intel 865G chipset with 64 MB of onboard graphics. I recently bought a GeForce 8400GS of 256 MB graphic card. But it didn't fit into my PCI slot. What's the problem? Please help me out and if possible, also, suggest a compatible graphics card for my PC.

Samonjoy Bhattacharya

PCI-Express is a completely different interface from the traditional PCI

A We aren't sure of what interface the card you just bought is. Your Intel 865G based motherboard only supports AGP cards. From the
