

A Anisotropic filtering will give you better looks, but performance may be hit. You need a graphics card that supports anisotropic filtering.

Bluetooth!

Q I'm using my cell phone's Bluetooth to connect to the Internet. Is it true that using Bluetooth a lot damages it? Internet is on at least 12 hours a day, via GPRS through Bluetooth. So is it okay to do so? Will it not be damaging to the Bluetooth device?

rahul_u_know_me

A I don't know about the Bluetooth system, but it will surely shorten your battery's overall life.

Krazy_About_Technology

A Your overall battery life may go down. Instead of giving, say, 10 hours on 100 per cent life, it may go down to 7 or 6.

Please Help. "usbENCHI.sys" Missing

Q When I connect my iPod (30 GB) to my computer (XP), the "DO NOT DISCONNECT" screen on the iPod does not appear. Also in XP, only the message "A high speed USB connected in a non-hi speed USB port".

When I went to device manager, I saw a yellow question mark on the USB mass storage icon. When I tried to install the driver, it asks for "usbENCHI.sys". Can you guys tell me from where I can get the usbENCHI.sys file?

kerthivasan

A You do not have USB 2.0 drivers installed, or the port you are connecting the iPod to is a USB 1.1 port.

Check if you have a USB 2.0 port on your computer and if you have drivers installed.

kumarmohit

Note: You can search Google to find the file that you need, just make sure it's from a legitimate source
