

How To Verify When The PC Was Last Used?

```

C:\WINDOWS\system32\cmd.exe
Statistics since 6/21/2008 5:27 PM

Bytes received                                0
Server Message Block (SMB) received          48
Bytes transmitted                             0
Server Message Block (SMB) transmitted       0
Read operations                              0
Write operations                             0
Raw reads denied                             0
Raw writes denied                           0

Network errors                               0
Connections made                             0
Reconnections made                           0
Server disconnects                           0

Sessions started                             0
Hung sessions                                0
Failed sessions                              0
Failed operations                            0
Use count                                    0
Failed use count                             0

```

The net statistics shows the current system uptime

Q How can I see when my PC was last used?

ra_sriniketan

A If you just want to know when it was last booted, in the command prompt window type:

```
net statistics
workstation
```

saROMan

Hibernate

Q Every time I boot, a hibernate file gets created, despite having been deleted both manually and by tune up utilities 2008. I want to disable it permanently—is there any way around?

manishjha18

A I think the hibernation option is itself not turned off, and so the hiberfil.sys is continuously getting recreated. Please disable hibernation from power options in Control Panel and recheck.

debsuvra

NTVDM CPU has encountered an illegal instruction

Q Whenever I try to execute Turbo C++, I get the following message:
16-bit MS-DOS Subsystem

Turbo C++ IDE, The NTVDM CPU has encountered an illegal instruction.
CS:0000 IP:0077 OP:f0 37 05 0e 02 Choose 'Close' to terminate the application. Help me out.

ddpatel78

A That's XP's fault trying to emulate DOS applications. Change compatibility mode to say Win 98 in properties and it should work fine.
