

fscCommand action

showmenu	true or false	True shows the menu of the Flash player and False turns it off.
exec	Path to application	The application is executed in a projector

Get URL

Get URL helps to connect a particular URL when you click on a button.

```
on (release) {
    getURL("www.thinkdigit.com");
}
```

This code means if you click on a button containing this script you will be connected directly to the Web site www.thinkdigit.com.

window:String [optional] – This is an optional property. It specifies the window or HTML frame where you want to load the document. Either you have to put a specific name or you have to choose from the following list.

_self : the url opens in the current frame in the current window.

_blank: the url opens in a completely new window.

_parent: the url opens in the parent of the current frame.
