

depends upon the greater brightness value of either the blend color or the base color. The effect that is created is similar to that of a color negative.

Invert: This blend mode can be used in Flash to invert the base color.

Invert type under blend mode

Alpha: This blend mode helps in applying an alpha mask in Flash.

also be used to remove the pixels present in the background image.

It should however be noted that the Erase and Alpha blend modes can only be applied to a parent movie clip if a blend mode apart from Normal is already applied on it.

It is very easy to apply blend mode to a movie clip in Flash. The blend modes in Flash can be applied from the Properties Inspector. This can be done by following certain simple steps in Flash.

1. First, select the movie clip instance present on the Stage.
2. Now, make adjustments in the transparency and color values of the movie clip instance.
3. This can be done from the Color menu in the Properties Inspector.
4. In the Properties Inspector, click on the Blend option.
5. From the drop down menu, choose the desired blend mode option.
6. The blend mode gets applied on the movie clip instance. The change can be seen instantly.

However, the correct type of blend mode should be chosen so that it matches the effect perfectly.
