

true and anioff is set to false. The visibility of soundon is then set to false while the visibility of sound off is set to true.

- The reverse happens when the sound button is pressed i.e sound-off is pressed and the sound stops.
- Now create another button for closing the application. Place this quit button at the top right corner of the application.
- Right click on the button and type the code by clicking on 'Actions'

```
on (release) {
    fscommand("quit");
}
```

- Next create two buttons named 'back' and 'next' which are created for navigation purposes.
- Click on the 'back button'. Right click on it and click on the 'Actions' options
- Now type the following code

```
on (release) {
    prevFrame(); // the user is taken to the previous frame
}
```

Similarly click on the 'next' button. Right click on it and click on the 'Actions' options. Now type the following code

```
on (release) {
    nextFrame(); // the user is taken to the next frame
}
```

- While creating the page 5.fla and page 6.fla files select the first key frame and right click on it. Now click on the Actions option

Back and Next Button
