

```

        posy = _y ;
    }
    onClipEvent (enterFrame) {
        Back._x = posx - _x ;
        Back._y = posy - _y
    }

```

8.3 Falling Snow

While making the application, keep the dimensions as 550 x 400 px. Set then background colour to black and frame rate to 35 fps.

- Let us learn to create an animated falling snow Effect.
- You can see an image on your screen.

- Let us now start to generate snow.
- Apply Insert > New Symbol.
- Now in the dialog box click on 'Advanced' button.

- Once we have added the new symbol, we will name it as 'ice'.
- Now change its property as the followings:
 - Name: ice
 - Type: Movie clip
 - Identifier: ice
