

viii. Remember that, here the text type must be normal or Static Text.

ix. Now go to the layer containing the input text.

x. With the Text Tool again create a text box just below the last text box

xi. Here also define the text type as Input text

xii. Set the variable name as 'k' for this input box

xiii. Now create a button to make the movie play

xiv. Now take a new layer

xv. In the 1st frame of this new layer, add this script:
Stop();

xvi. In the 10th frame add key frame to all the layers.

xvii. In the 10th keyframe of the Static Text layer, delete all contents

xviii. Also, in the 10th keyframe of the Input Text layer, delete the contents and add a new text field

xix. Set the type as Dynamic Text

xx. Set the variable name of this Dynamic Text to finalName

xxi. Now move to the 1st keyframe and right click on the button

xxii. Choose Actions and type the following code:

```
on (release) {
    var str1:String
    str1=j
    var num1:Number;
```
