

```
style_fmt1 = new TextFormat();
style_fmt1.align = "justify";
this.createTextField("bodytext",
this.getNextHighestDepth(), 227, 81, 520, 422);
bodytext.setNewTextFormat(style_fmt1);
```

- Open another ActionScript file and type the following script. Save the file as 'h-text-img.as' file.

```
bodytext.html = true;
bodytext.wordWrap = true;
bodytext.multiline = true;
bodytext.condenseWhite = true;
bodytext.selectable = false;
var myCSS = new TextField.StyleSheet();
var cssURL = "style.css";
myCSS.load(cssURL);
myCSS.onLoad = function(success) {
    if (success) {
        bodytext.styleSheet = myCSS;
        bodytext.text = "CSS file loaded successfully. You may proceed.";
    } else {
        bodytext.text = "CSS file failed to load!";
    }
}

myContent = new XML();
myContent.ignoreWhite = true;
myContent.load("intro.xml");
myContent.onLoad = function(success) {
    if (success) {
        bodytext.text = myContent;
    } else {
        bodytext.text += "<br /> XML file failed to load!";
    }
}
```
