

The above code specifies the location of the existing CSS file and then loads the current CSS file. The file style.css is described below

Style.css

```
h1{
  font-family:Helvetica, Arial, sans-serif;
  font-size:22px;
  color:#5B3E00;
}

byline{
  font-family:Tahoma;
  font-size:13px;
  color:#000000;
  display:block;
}
```

Here the various font parameters associated with the header h1 i.e font-family, font size and color are declared. These font parameters associated with the h1 header of the xml documents appear according to the above specifications.

The byline is the body tag and the various parameters associated with it i.e., colour, display, font-size and font-family are declared above. The text within this tag appears according to the above specifications.

```
myCSS.onLoad = function(success) {
  if (success) {
    bodytext.styleSheet = myCSS;
    bodytext.text = "CSS file loaded successfully. You may proceed.";
  } else {
    bodytext.text = "CSS file failed to load!";
  }
}
```
